Ocular Trauma Skill Transfer Workshop

March 18th & 19th, 2017

Venue: Ramaiah Advanced Learning Centre

Dear Friends,

Ocular trauma though not an everyday encounter for most ophthalmologists, is a serious problem often resulting in significant visual disability. And most often ocular trauma occurs in younger age groups resulting in a socio-economic burden, and sadly these injuries are not preventable.

The more serious types of ocular trauma – such as ruptured globes and corneal lacerations require meticulous examination, planning and timely surgical reconstruction to ensure maximum preservation of vision.

This workshop aims to enhance your knowledge and skills in treating ocular trauma. The workshop will give you a hands-on experience on cadavers and goat's eyes, under the guidance of experienced ophthalmologists. Hands-on experience in amniotic membrane transplantation will be the highlight of the workshop. The workshop will comprise of a few didactic lectures and a full day of hands-on experience.

This will be a great learning opportunity to hone your skills in dealing with ocular trauma.

Course Content

Date: 18th March 2017

Time: 2.00pm to 4.30pm

Assessment of the patient

- 1 History taking in ocular trauma
- 2 Examination of anterior segment and adnexa
